Any person subsequently offering, selling or recommending the Securities (a "**distributor**") should take into consideration the manufacturer's target market assessment; however, a distributor subject to MiFID II is responsible for undertaking its own target market assessment in respect of the Securities (by either adopting or refining the manufacturer's target market assessment) and determining appropriate distribution channels, subject to the distributor's suitability and appropriateness obligations under MiFID II, as applicable.

6. Performance of Underlying/Formula/Other Variable, Explanation of Effect on Value of Investment and Associated Risks and Other Information concerning the Underlying

The Commodity Mini Future Call or Put Certificate is an Open End Turbo ("OET") Certificate being a leveraged security with no fixed term, which gives investors a level of exposure from moderate to high to the price and performance of the relevant Commodity as described in Part A "Specific Provisions for each Series" (the "Underlying Commodity") that is greater than

the capital invested. The leveraged nature of the Certificates means that any movement in the value of the Underlying Commodity will have a magnified effect on the value of the Certificates, both positively and negatively.

In respect of Call Certificates, the Certificates will increase in value when the Underlying Commodity increases in value and decrease in value when the Underlying Commodity decreases in value.

In respect of Put Certificates, the Certificates will increase in value when the Underlying Commodity decreases in value and decrease in value when the Underlying Commodity increases in value.

The Certificates are "OET Call" Certificates or "OET Put" Certificates. The Certificates feature a Capitalised Exercise Price and a Security Threshold (which is higher than the Capitalised Exercise Price in respect of Call Certificates and lower than the Capitalised Exercise Price in respect of Put Certificates). Both the Capitalised Exercise Price and the Security Threshold are adjusted by the Calculation Agent on a daily basis according to the cost of financing (the "Financing Rate").

The closer the value of Security Threshold to the level of the Underlying Commodity from time to time, the higher the leverage effect will be and the higher the risk that the Security Threshold will be reached. The Certificates will be automatically early redeemed at a price between zero and their residual value if the level of the Underlying Commodity reaches the Capitalised Exercise Price. Otherwise they have no fixed redemption date and the Issuer may choose to redeem them at any time upon giving notice to Holders.

On redemption, Holders will receive an amount, which may be zero, determined by reference to the performance of the Underlying Commodity, the Capitalised Exercise Price, the Financing Rate and, if applicable, the performance of the Conversion Rate between the Commodity Currency and the Settlement Currency.

Information on each Commodity shall be available on the relevant Underlying website as set out in "Specific Provisions for each Series" in Part A.

Past and further performances of each Commodity are available on the relevant Underlying website as set out in "Specific Provisions for each Series" in Part A and the volatility of each Commodity may be obtained from the Calculation Agent: markets.ch@bnpparibas.com

The Issuer does not intend to provide post-issuance information.
